

## Measuring Information – Uncovered Window

### Regular Window: How to Measure for Uncovered Window

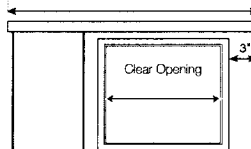

1. Determine the clear opening width for one-way draw or split draw (see diagrams)\*.
2. Match the clear opening width with dimension found under Clear Opening column on the following pages. For even spacing, round up width measurement to the next size in the chart. Split draw will have even numbers of panels.
3. Order the corresponding dimension found in the finished blind width column on the following pages

Example: One-Way Draw

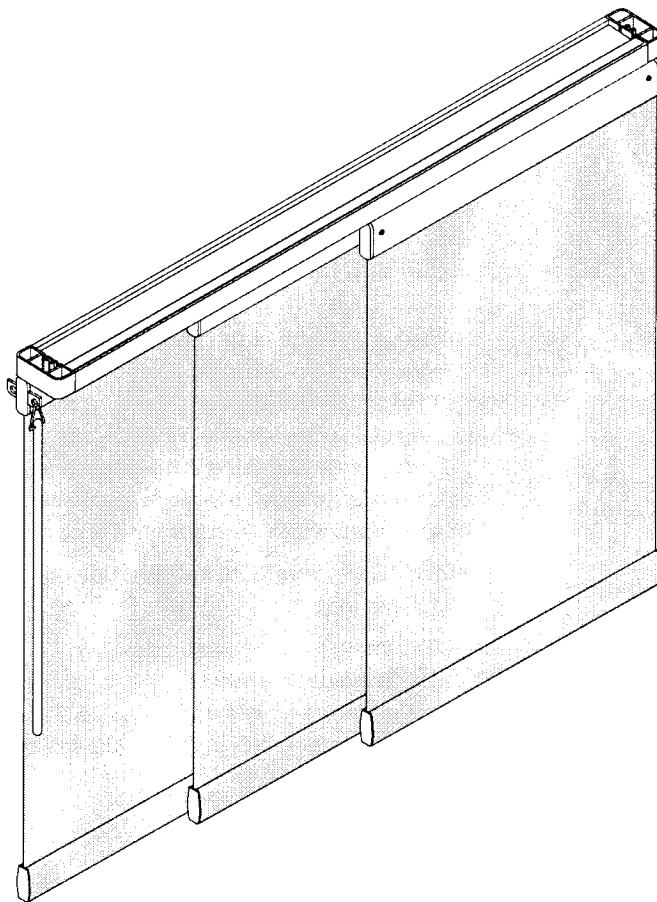

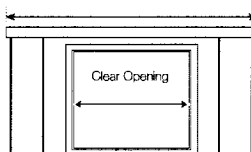

If determined width for clear opening window view is 57", order width needed to provide full unobstructed view is 80".

**\*NOTE:** Add an additional 3" for privacy and light control to the clear opening **before** determining the finished blind width.

One Way Draw Finished Blind Width

Split Draw  
(recommended for balanced appearance)  
Finished Blind Width
